

CASTELLATED LOW-PROFILE

Product Datasheet

The castellated low-profile underfloor heating system is designed for refurbishment projects where floor build-up is at a premium. The system incorporates a 12mm underfloor heating pipe within a plastic castellated panel, which is then covered with 20mm of reinforced levelling compound.

This system is designed to be laid directly onto a structural and level sub-floor or chipboard floor or insulation layer.

Most floor finishes can be laid directly on top of this system, with tiled floors we would recommend the use of a de-coupling membrane to soak up any lateral movement and reduce the risk of hairline cracks appearing in the grout.
